Company Overview

Rayon is a Paris based architectural and interior design software company, founded in 2021 by Bastien Dolla and Stanislas Chaillou to modernise how architecture, engineering and construction (AEC) professionals create floor plans and technical drawings. The platform is entirely browser based, positioning itself as a faster, simpler and more affordable alternative to legacy CAD software such as AutoCAD, while still targeting professional grade output.

Today, Rayon serves architects, interior designers and students, with a stated user base drawn from the 35 million people globally who work on floor plans daily, and it continues to expand its feature set around collaborative, real time drawing. The company was recognised in ArchDaily's 2023 Best New Practices list for its collaborative approach to design, reflecting its growing profile within the AEC software space

Products and Services

- **Fast 2D drafting**, tools for drawing walls, doors and windows with automatic annotation.
- **Large block library**, over 4000 furniture and architectural blocks for reuse across projects.
- **Templates**, ready made layouts for interior design and architectural drawings.
- **Technical drawing suites**, tools for lighting, electrical, plumbing, HVAC and fire safety plans.
- **Real time collaboration**, browser based co-editing so teams can draw and share floor plans together.
- **PDF and export tools**, generation of finalised floor plan documents for client and project use.
- **Tiered plans**, free, Pro and Team subscriptions, with a free tier for students via university email.

Company Overview

Postman is the world's leading API platform, helping over 40 million developers and 500,000 organisations design, build, test, and manage APIs throughout the entire API lifecycle. Founded in 2014 and headquartered in San Francisco, with additional offices in Bangalore, where it was originally founded, and Tokyo, Postman has grown into a company employing roughly 2,560 people worldwide as of late 2025. Today, 98% of Fortune 500 companies rely on Postman, and the platform has evolved from a developer-favourite API testing tool into an enterprise-grade, AI-ready API platform that supports contract-first governance, secure secret management, and machine-consumable API design for agentic and human teams alike. Postman also maintains the Postman API Network, the world's largest public directory of over 100,000 APIs, and remains privately held, having reached unicorn status with a USD 5.6 billion valuation following its 2021 Series D funding round.

Products and Services

- **API client**, a comprehensive multi-protocol client with built-in authentication, response visualisation, environments, cookie and certificate management.
- **API design tools**, including Spec Hub, mock servers, multi-file definitions, collection templates, and API prototyping templates.
- **API documentation**, featuring AI-generated documentation, code examples, folder-based organisation, and customisation options.
- **API collaboration**, offering an API repository, internal, partner, multi-partner and public workspaces, version control, and role-based permissions.
- **API distribution**, via the Public and Private API Networks, public workspace metrics, and API gateway integrations.
- **API testing**, with Collection Runner, Postman CLI, automated and AI-generated tests, CI/CD integrations, and performance and regression testing.
- **API monitoring**, including monitors, traffic insights, static IP allowlisting, and multi-region support.

- **API security and governance**, with BYOK, Postman Vault, Secret Scanner, custom governance rules, and audit logs.
- **AI-supported workflows**, including the Postman MCP server and a catalogue of external MCP servers for agentic API consumption.

Rayon Review

Rayon does not appear to be covered on Gartner Peer Insights, as its footprint sits more within the architecture and interior design software category rather than enterprise IT, so the most useful independent feedback comes from G2 and Capterra, both of which show strong satisfaction with the tool's speed and simplicity. Independent write ups echo this sentiment, with reviewers praising Rayon's combination of speed, drawing quality, user friendly tools and responsive support, alongside favourable value comparisons against traditional CAD pricing.

Postman Review

Postman API Platform holds a strong reputation on Gartner Peer Insights, with reviewers frequently praising its intuitive interface, robust collaboration features, stable performance, and ease of use for API testing and debugging. Users across industries, from software engineers to logistics specialists, consistently highlight how Postman streamlines development cycles, improves team communication, and handles complex API requests without significant lag.

Company Overview

Cursor, developed by Anysphere, Inc., has grown from a niche coding tool into one of the fastest-scaling AI companies globally, now valued at USD 29.3 billion and generating over USD 3 billion in annual recurring revenue as of early 2026. The San Francisco-based firm builds an AI coding agent and software development environment that allows developers to edit code, search codebases, run terminal commands, and complete programming tasks through natural-language instructions. Cursor's technology is now used by more than 70 percent of Fortune 500 companies to deploy and manage AI coding agents across the software development lifecycle, and its enterprise offering states it is trusted by 64 percent of Fortune 500 firms specifically for team-wide adoption. In April 2026, the company launched Cursor 3, a unified workspace designed to bring clarity to how developers and AI agents collaborate on building software.

The team has expanded to over 300 engineers, researchers, designers, and operators, reflecting the scale of investment behind its mission to become the leading applied research team for the future of software development. In a major strategic development, SpaceX announced on 16 June 2026 that it will acquire Cursor at a valuation of \$60 Billion, placing the company under its xAI subsidiary.

Products and services

- **AI coding agent**, plans, writes, and reviews code using AI models that understand an entire codebase.
- **Cursor 3 workspace**, a unified environment for building software collaboratively with AI agents.
- **Multi-platform availability**, accessible via Desktop, CLI, Web and Mobile so developers can work from anywhere.
- **Codebase search and editing**, enables natural-language driven file edits and multi-step programming tasks.
- **Terminal command execution**, allows the agent to run commands directly as part of automated workflows.
- **Cursor for Enterprise**, a dedicated enterprise tier with governance, security and team-wide deployment features.
- **Proprietary coding models**, the company trains what it describes as the world's most widely used coding models, supported by infrastructure handling billions of requests daily.
- **Community plugin ecosystem**, extendable through Cursor Directory, which hosts plugins from over 84,500 developers.

Cursor Review

Cursor was named a Leader in the 2026 Gartner Magic Quadrant for Enterprise AI Coding Agents, achieving the furthest placement on the Completeness of Vision axis among all evaluated vendors. On Gartner Peer Insights, Cursor holds a strong 4.6 out of 5 star rating based on 92 to 137 verified user reviews, comparing favourably against major competitors in the AI coding agents category.
